Composition: "The role of computers" from Zeng Li (Grade 3)

The teacher asked me to describe my feeling for music lessons in the IT classroom. I like going to our IT classroom to play with the computer, but not to sing a song. I will write something that I felt about the computer, but not about music, which is also about the feeling in the IT classroom. I think it is acceptable. Am I right, teacher?

The world in the computer is really fantastic. We are able to see many things via the computer, which we have never seen before. Since I have been longing for prairie for a long time, I could only imagine in my mind before. After we have the IT classroom and the computer, we are able to reach the video for the prairie, in which there are thousands of miles green grass and thousands of horses. It is really magnificent! I am willing to traverse in such a vast prairie on horseback one day in the future.

Reading is also my favorite. I often use IT classroom to read books, since there are not enough books in the school library. Teacher said it is very important for us, primary school students, to read books as many as possible. So each time we go to the IT classroom, she will leave some time for us to free read. I cannot agree with her more. But one thing need to be noticed is that there are some students sometimes playing the computer games. It is quite easy for us to be addicted to the computer games, which I think is not good.

So there are good sides and bad sides for the Internet and computers. We should learn how to correctly use them. Also like the teacher said, we should have self-control as well.
